

WEAPONS RACK

SPECIFICATIONS:

Hi-Density's Weapons Racks are constructed of solid highly durable non-marring wear resistant polyethylene (HDPE) most commonly used as wear guards in heavy equipment and machinery due to its strength and durability. By using this material in weapons storage systems we can offer the most universal, weapon safe, non-marring, durable storage racks for today's high tech weapons, and the weapons of the future. The non-marring material in the racks is solid and will not brake bend ,wear away or fall off leaving exposed steel to make direct contact with the weapons.

Barrel Supports:

Barrel supports are machined from one piece of 3/8" thick solid High Density Polyethylene (HDPE) material having no guards or coatings to fall off or wear away. All standard supports are to be capable of accommodating weapons with or without scopes, sights and/or grenade launcher.

Gunstock Supports:

Gunstock Supports are of the same material as barrel supports mounted to a 6061-T6 aluminum extruded channel with a 3/4' thick x 1" wide HDPE strip mounted in the base of the channel to insure the weapon tilts to the rear of the rack and can not tip out of the rack.

Pistol Racks:

Pistol Racks are machined from a 3/4" thick solid piece of HDPE designed to support the pistol barrel and grip from the exterior of the weapon leaving the barrel rifling unaffected.

Large Weapons Storage:

All **M2** Racks are of the same construction and store **2-barrels** directly behind **1-gun** with the capability for one lock to secured each set of 2-barrels and 1-gun. Each 12”d x 36”w Rack must hold 4-sets of 2-barrels and 1-gun, a 42”wide rack must hold 4 sets, and a 48” wide rack must hold 5 sets of 2-barrels and 1-gun

All **MK19** Grenade launcher Racks are of the same construction, and store all weapons in a vertical position. Racks must store **3-MK19** in a 15”d x 36”w rack and **4-in 42”**, and 48” wide racks with the capability of locking all weapons in each rack with one lock where necessary.

Weapon Rack Locks:

Each Barrel Support can be equipped with a one piece lock assembly machined from a solid piece of 3/4” thick HDPE mounted to the Barrel Support with 4-3/8”round steel shoulder bolts. The Unique slide lock design locks all weapons in each rack with one DOD approved padlock.

Pistol Rack Locks:

The Pistol Rack lock is made of the same material as barrel support lock fitted with a rubber coated 3/8” steel hook for each pistol that locks the pistol in the rack through the trigger guard each lock assembly is of similar design as the barrel support lock securing all pistols in each rack with 1-DOD approved padlock.
